

Diabetes Management Care for Aged and Disability Service Providers

Executives, Senior Managers and Governance

Welcome to the Diabetes Care Governance for Aged and Disability Executive Leaders program. As the aged care and disability sectors face increasing regulatory scrutiny, ensuring safe, high-quality diabetes care is a critical clinical governance and organisational risk priority.

This comprehensive course is designed specifically for executives, board members, and senior leaders operating under the strengthened Aged Care Quality Standards and NDIS Practice Standards. You will explore the complexities of diabetes management in vulnerable populations, including older people and individuals with cognitive or intellectual disabilities. The programme delves into essential governance frameworks, board assurance measures, and risk registers to help you oversee clinical risks, medication safety, and workforce capability effectively. Beyond compliance, this course emphasises a person-centred approach, balancing duty of care with dignity of risk. You will learn how to implement robust systems for individualised care planning, safe insulin administration, and emergency escalation.

Furthermore, you will tackle contemporary challenges such as polypharmacy, the safe management of GLP-1 medicines, and the delegation of high-intensity supports. By evaluating trend data, incident reports, and workforce competency frameworks, you will be equipped to lead a psychologically safe environment that prioritises the health, independence, and quality of life of those you support.

Transform your organisation's diabetes care governance, mitigate clinical risks, and ensure exceptional outcomes for your community.

Learning Outcomes

By the end of this program, you will be able to:

- Analyse executive accountability and clinical governance priorities for diabetes care in aged care and NDIS-funded services.
- Design board-level assurance measures, risk registers, and performance reporting frameworks for diabetes-related incidents.
- Evaluate the impact of ageing, cognitive impairment, and disability on diabetes vulnerability and self-management.
- Establish robust systems for individualised, person-centred diabetes care planning that balance duty of care with dignity of risk.
- Implement medication safety controls for insulin, GLP-1 medicines, and polypharmacy to prevent adverse events.
- Develop a tiered workforce training and competency framework for staff delivering high-intensity diabetes supports.
- Lead a culture of continuous quality improvement, utilising audit data and incident investigations to enhance care outcomes.

Disclaimer: Our soft skills self-paced courses are designed with a human-in-the-loop with the assistance of generative AI.

Who is this Course For?

This course is for Executives, Senior Managers and Governance in the disability and aged care sector who are responsible for the policies, procedures and reporting requirements to maintain a safe environment for those participants who live with Diabetes Type 1 or 2.
